

Don't let data leak out of **your** business...

Data security and management is one of the greatest concerns to many companies and computer users when recycling their old IT, laptops and smartphones.

At ShP we understand this concern and have developed a secure data erasure and management service that offers peace of mind and guarantees that your sensitive data is managed and destroyed forever.

What is secure data erasure and how does it work?

Using Blancco licensing software, our data erasure process enables us to go one step further than standard methods of data deletion. Our service completely overwrites all sections of data hard drive and other digital media with blank information leaving no trace or possibility to recover the data.

blancco™

ShP data erasure service

Step 1

Collected devices begin standard factory reset and data erasure procedures.

Step 2

The devices are then connected to a Blancco data port via USB where a complete Blancco wipe begins erasing any remaining data from step one rewriting the hard drive with blank data.

Step 3

Once the Blancco wipe is complete, an erasure report is generated and the device is completely free of data.

ShP data erasure summary:

- Complementary data wipe service on all compatible data storage devices
- Full comprehensive reporting to prove data erasure
- Developed for Symbian, BlackBerry and Microsoft smartphone platforms
- Securely erases data from all types of files and hard drives
- Enables compliance with global security and privacy regulations
- Conforms to the highest standards and exceeds legislative requirements
